What is JRE?

JRE (Java Runtime Environment) is the software required to run Java application. It provides environment in which Java program can execute.

* Purpose of JRE:

- Run Java application
- Provide the necessary library and runtime environment
- Enable Java program to execute on different operating system
- Does not include development tools like Java compiler (Javac)

* Component of JRE

• JVM:

Execute bytecode

convert bytecode into machine code

It made Platform Independent

• Java class library

Java.lang, Java.util, Java.io, Java.net

• Run time files.
